- Garment construction
- Pattern making
- Industrial engineering
- Internet Of Things

### Software skills

- MS Office
- 2D CAD
- Auto CAD
- R-studio
- Web development

## LANGUAGES

- English
- Hindi
- Malayalam

## PROFILE

Final-year Fashion Technology student at NIFT Kannur. With a strong academic background and hands-on experience in the textile and apparel industry. I have developed skills in garment construction, fabric analysis, & production processes through various projects and internships. Seeking dynamic roles in Sourcing, Merchandising, Ecommerce, Buying, or Product Development to apply my knowledge of fashion trends, vendor relations, and cost optimization in a fast-paced, growth-oriented environment.

## WORK EXPERIENCE

### • Cosmos sports (2025-Present)

Buying & Merchandising intern (Graduation Project)

- Assisting in order consolidation, including quantity, color, size, and supplier-wise allocations.
- Coordinating with suppliers.
- Analyzing sales and inventory data to optimize stock levels.
- Supporting the development of new product lines by researching trends and materials.

### • Texport syndicate (June-July 2024)

Apparel intern

- Studied various departments, from supplier order placement to final product packaging.
- Conducted time studies to improve production efficiency.
- Performed quality inspections to ensure product standards.

### • Alok Industries (June 2023)

Textile intern

- Gained experience in fabric development, testing, and quality control.
- Studied different textile processes, from fiber selection to final fabric production.
- Conducted fabric performance tests to assess durability, strength, and texture.

## PROJECTS

### • Market Research & Analysis on Performance-Lifestyle Sportswear for Women's Expansion at Cosmos

- This project focuses on understanding consumer preferences in women's fitness apparel to design functional, stylish, and comfortable activewear. The insights gathered will guide product development tailored to real user needs in terms of fit, style, fabric, and pricing.

### • QR Scanner Suggestion for Bundling Tray & Sewing Line – "TEXFAST"

- Proposed adding QR scanners to bundling trays to track garment movement and spot bottlenecks in the sewing line. Suggested using TEXFAST, a cloud-based system, to manage real-time production data. Recommended developing a mobile app with secure login for easy monitoring of efficiency and workflow.

### • Suggestion of working aids in finishing department

- Worked on improving efficiency in the finishing department by identifying common issues like slow work and mistakes. Suggested practical tools and methods to enhance workflow, reduce errors, and improve garment quality, making the process smoother and more effective.

### • Co2 Laser Cutting Machine with Passcode Locker

- Integrated a passcode system into a laser cutting machine to restrict access and ensure authorized operation, enhancing safety and security.
